

## What is AI Synapse?

Akrivia Health and IQVIA are building (AI) Synapse, a research-focused AI platform for neuroscience, leveraging the world's largest real-world dataset in dementia, psychiatric, and neurological disorders to accelerate real-world evidence and clinical research. Advanced AI and NLP convert unstructured health records into high-quality research datasets, enabling deeper insights and scalable impact for academic and clinical investigators

## What does AI Synapse enable?

## How does AI Synapse work?

## How is your organization supported?

- Free access** without any platform setup or licensing fees
- Full support for technical deployment** and software updates for network participants
- Flexible hosting** with on-premises, private cloud or hybrid models
- Immediate benefits** with instant access to AI-powered clinical dashboards, patient insights and predictive analytics

- Enterprise-Grade Security:** Fully compliant with HIPAA, NIST, ISO 27001, and GDPR standards<sup>1</sup>
- Validated at Scale:** Co-developed with NHS and Oxford University, processing over 7.5 million mental health records from across the UK
- Global Network:** Access to diverse, longitudinal datasets spanning conditions like depression, anxiety, bipolar disorder, dementia and Parkinson's disease
